How to: Remove Bugs using the Bug Buster

This small version of our Mop can be used three different ways.

1. Spray the front of the vehicle with Wash Wax ALL (Blue)
2. Let the Wash Wax ALL soak for 5-10 minutes
3. Re-spray an area that you can comfortably clean before the Wash Wax ALL dries
4. Scrub the area with the scrubber side of the Bug Buster (For extra scrubbing power, put the bug buster in the power edge position).
5. Flip over to the Mop side of the Bug Buster and wipe off the majority of the bugs. It is not important at this stage that you get all the bugs and or streaks off, you just want to break them up and get the bulk of them off, step 6 will complete the cleaning.

If you are cleaning a large area like the front of an RV, we recommend you use the Wash Wax Mop for Step 6. If you do not have the Wash Wax Mop or you are cleaning smaller areas like the leading edges of an aircraft, put a microfiber pad on both sides of the bug buster to make it a Wet & Dry mop.

6. Take (2) clean, dry mop pads and place one on the “dry side”. Wet the other pad with fresh water and wring it out so it is only damp. Then place it on the “wet side”. Wipe off the remaining bugs with the Wet side, then flip the mop over and thoroughly dry the area. Do this until you have cleaned all the areas.

Do not apply Wash Wax ALL during step 6.

Going over glass with a damp towel or pad followed by a dry towel or pad (step 6) will remove any possible streaks left by the Wash Wax ALL. You will still have the water beading protection. Also see How to Clean Glass with Wash Wax ALL, pg. 7.

NOTE:

- Pre-soaking the bugs with Wash Wax ALL (blue) will make it much easier to remove dried or caked on bugs.
- The next time you remove bugs, it will be easier due to the non-stick coating left behind by the Wash Wax ALL.
- Keep in mind that you can put the Bug Buster in the power edge scrubbing position for hard to remove bugs
- For best results, avoid hot surfaces when removing bugs
- The wing nut on the Bug Buster can be adjusted to keep the Bug Buster from pivoting too easily.
- Wash Wax ALL and the Bug Buster/Aero Scrubber are safe on Chip Guard Laminates, paint protection films such as Diamond Coat, and on TKS aircraft de-ice systems.
- The Bug Buster can be used as a Mini Mop by placing a mop pad on both sides of the Bug Buster. This is excellent for getting into tight, hard-to-reach spaces found on RVs, aircraft, and boats.
