

## **How to Clean Glass Windows with Wash Wax ALL**

**1.                    2.                    3.                    4.**

**Spray On – Wipe Dry – Damp Towel – Dry Towel**

1. Spray the glass with Wash Wax ALL (Blue)
2. Wipe the glass dry with a dry towel
3. If you see any streaking, take a clean towel, wet it with fresh water, wring it out, and wipe the glass with the damp towel.
4. Dry the glass with a clean dry towel

### **Note:**

- The reason that streaking may occur on glass is because glass is not as porous as paint, plexi-glass, or gel coat. For this reason, any unabsorbed wax from the Wash Wax ALL may leave slight streaking on the glass surface. The damp towel will remove any excess wax from the glass.
- Use clean towels that do not have any Wash Wax ALL on them for step 3 and 4
