

## How to remove bugs

- 1.
- 2.
- 3.
- 4.
- 5.

### **Spray On – Let Soak – Spray On – Scrub – Wipe Dry**

1. Spray the area with Wash Wax ALL (blue) and let soak for 10-15 minutes.
2. After 10-15 minutes re-spray an area you can comfortably clean before the Wash Wax ALL dries and use the Aero Scrubber Pad to break up the bugs.
3. Wipe the area dry with a microfiber towel before the Wash Wax ALL dries on its own.

#### **Note:**

- Pre-soaking the bugs with Wash Wax ALL (blue) will make it much easier to remove dried or caked on bugs. This includes love bugs.
- The Wash Wax ALL (blue) will make it much easier to remove bugs after the initial cleaning due to the non-stick coating that Wash Wax ALL leaves behind.
- We have found microfiber towels to be the best towel for bug removal.
- The Aero Scrubber is a soft non-scratching pad that makes removing bugs much faster and easier. It is safe for use on all surfaces including paint, gel coat, and glass.
- Wash Wax ALL and the Aero Scrubbers are safe on Chip Guard Laminates and paint protection films such as Diamond Coat.
- Consider using the Bug Buster/Mini Mop for any hard to reach areas. (see How to use the Bug Buster)
- See how to remove wax streaks from glass in “How to clean glass windows with Wash Wax ALL.”

CAUTION: Do not use window squeegees found at gas stations and truck stops. The material on the scrubber side of the squeegee can scratch. These are okay to use on glass, but not on paint, gel coat, or plastic surfaces.
